Data Notes

*St. Charles Redmond consolidated with St. Charles Bend to form a single hospital. The St. Charles system did not submit a cost report to CMS for the Redmond facility and combined its financials into St. Charles Bend 2021 Medicare Cost Report.

Health system level data are collected from audited financial statements submitted to OHA. These reports are based on the fiscal year of the health system. Data includes the entire system and all affiliated organizations to that system, and in many cases include facilities located outside of Oregon. Health system data will note what states the health system operates in and the approximate size of the health system in terms of number of hospitals, clinics, and clinicians.

Hospital level data is collected from the Databank quarterly hospital financial reporting system. This data is all reported on a calendar year basis. Data are provided for the full year of 2021 and for the first three quarters (January 1st through September 30th) of 2022, which is the current year-to-date available.

Hospital level data also includes two metrics supplied by the National Academy for State Health Policy (NASHP) which are derived from Medicare Cost Reports. They are:

Net Patient Revenue per Adjusted Patient Discharge

Total Operating Costs per Adjusted Patient Discharge

These metrics use a calculated patient volume figure to establish an estimated “*per discharge*” amount for both the revenue a hospital earns providing health care services and the total amount of operating expenses it incurs. Detailed definitions for these metrics can be found at: <https://tool.nashp.org>

The NASHP provided metrics compare the individual hospital amounts with the nationwide median for all hospitals.
